URL	Transfer Size	Potential Savings
/*! * Font Awesome Free 5.15.4 by @fontawesome - https://fontawesome.com * License - https://fonta...	12.0 KiB	12.0 KiB
Efficiently encode images		
Optimized images load faster and consume less cellular data. Learn more .		
Serve images in next-gen formats		
Image formats like WebP and AVIF often provide better compression than PNG or JPEG, which means faster downloads and less data consumption. Learn more .		
Enable text compression		
Text-based resources should be served with compression (gzip, deflate or brotli) to minimize total network bytes. Learn more . FCP LCP		
Preconnect to required origins		
Consider adding `preconnect` or `dns-prefetch` resource hints to establish early connections to important third-party origins. Learn more . FCP LCP		
Initial server response time was short — Root document took 10 ms		
Keep the server response time for the main document short because all other requests depend on it. Learn more . FCP LCP		
<input type="checkbox"/> Show 3rd-party resources (0)		
URL	Time Spent	
/magic-square-game/index.html (eoinlarkin.github.io)	10 ms	
Avoid multiple page redirects		
Redirects introduce additional delays before the page can be loaded. Learn more . FCP LCP		
<input type="radio"/> Preload key requests		
Consider using `<link rel=preload>` to prioritize fetching resources that are currently requested later in page load. Learn more . FCP LCP		
Use HTTP/2		
HTTP/2 offers many benefits over HTTP/1.1, including binary headers and multiplexing. Learn more .		
Use video formats for animated content		
Large GIFs are inefficient for delivering animated content. Consider using MPEG4/WebM videos for animations and PNG/WebP for static images instead of GIF to save network bytes. Learn more LCP		
Remove duplicate modules in JavaScript bundles		
Remove large, duplicate JavaScript modules from bundles to reduce unnecessary bytes consumed by network activity. TBT		
Avoid serving legacy JavaScript to modern browsers — Potential savings of 0 KiB		
Polyfills and transforms enable legacy browsers to use new JavaScript features. However, many aren't necessary for modern browsers. For your bundled JavaScript, adopt a modern script deployment strategy using module/nomodule feature detection to reduce the amount of code shipped to modern browsers, while retaining support for legacy browsers. Learn More TBT

<div><div></div><div>○ Lazy load third-party resources with facades</div><div></div></div>		^
Some third-party embeds can be lazy loaded. Consider replacing them with a facade until they are required. Learn more. <div>TBT</div>		
<div><div></div><div>○ Largest Contentful Paint image was not lazily loaded</div><div></div></div>		^
Above-the-fold images that are lazily loaded render later in the page lifecycle, which can delay the largest contentful paint. Learn more.		
<div><div></div><div>Uses passive listeners to improve scrolling performance</div><div></div></div>		^
Consider marking your touch and wheel event listeners as `passive` to improve your page's scroll performance. Learn more.		
<div><div></div><div>Avoids <code>document.write()</code></div><div></div></div>		^
For users on slow connections, external scripts dynamically injected via `document.write()` can delay page load by tens of seconds. Learn more.		
<div><div></div><div>○ Avoid non-composited animations</div><div></div></div>		^
Animations which are not composited can be janky and increase CLS. Learn more <div>CLS</div>		
<div><div></div><div>Image elements have explicit <code>width</code> and <code>height</code></div><div></div></div>		^
Set an explicit width and height on image elements to reduce layout shifts and improve CLS. Learn more <div>CLS</div>		
<div><div></div><div>Has a <code><meta name="viewport"></code> tag with <code>width</code> or <code>initial-scale</code></div><div></div></div>		^
A `<meta name="viewport">` not only optimizes your app for mobile screen sizes, but also prevents a 300 millisecond delay to user input . Learn more. <div>TBT</div>		

Accessibility

These checks highlight opportunities to [improve the accessibility of your web app](#). Only a subset of accessibility issues can be automatically detected so manual testing is also encouraged.

Additional items to manually check (10) — These items address areas which an automated testing tool cannot cover. [Learn more](#) in our guide on [conducting an accessibility review](#).

<div><div></div><div>○ The page has a logical tab order</div><div></div></div>		^
Tabbing through the page follows the visual layout. Users cannot focus elements that are offscreen. Learn more.		
<div><div></div><div>○ Interactive controls are keyboard focusable</div><div></div></div>		^
Custom interactive controls are keyboard focusable and display a focus indicator. Learn more.		
<div><div></div><div>○ Interactive elements indicate their purpose and state</div><div></div></div>		^
Interactive elements, such as links and buttons, should indicate their state and be distinguishable from non-interactive elements. Learn more.		
<div><div></div><div>○ The user's focus is directed to new content added to the page</div><div></div></div>		^
If new content, such as a dialog, is added to the page, the user's focus is directed to it. Learn more.		
<div><div></div><div>○ User focus is not accidentally trapped in a region</div><div></div></div>		^
A user can tab into and out of any control or region without accidentally trapping their focus. Learn more.		
<div><div></div><div>○ Custom controls have associated labels</div><div></div></div>		^
Custom interactive controls have associated labels, provided by <code>aria-label</code> or <code>aria-labelledby</code> . Learn more.		
<div><div></div><div>○ Custom controls have ARIA roles</div><div></div></div>		^
Custom interactive controls have appropriate ARIA roles. Learn more.		

<div><div><div><div><div><div></div><div>Visual order on the page follows DOM order</div></div></div><div><div></div><div></div></div></div></div><div>DOM order matches the visual order, improving navigation for assistive technology. Learn more.</div></div>	^
<div><div><div><div><div><div></div><div>Offscreen content is hidden from assistive technology</div></div></div><div><div></div><div></div></div></div></div><div>Offscreen content is hidden with display: none or aria-hidden=true. Learn more.</div></div>	^
<div><div><div><div><div><div></div><div>HTML5 landmark elements are used to improve navigation</div></div></div><div><div></div><div></div></div></div></div><div>Landmark elements (<main>, <nav>, etc.) are used to improve the keyboard navigation of the page for assistive technology. <div><div><div></div></div><div>No form fields have multiple labels</div><div></div></div>	Form fields with multiple labels can be confusingly announced by assistive technologies like screen readers which use either the first, the last, or all of the labels. Learn more .
<div><div><div></div></div><div><frame> or <iframe> elements have a title</div><div></div></div>	Screen reader users rely on frame titles to describe the contents of frames. Learn more .
<div><div><div></div></div><div>Image elements have [alt] attributes</div><div></div></div>	Informative elements should aim for short, descriptive alternate text. Decorative elements can be ignored with an empty alt attribute. Learn more .
<div><div><div></div></div><div><input type="image"> elements have [alt] text</div><div></div></div>	When an image is being used as an `<input>` button, providing alternative text can help screen reader users understand the purpose of the button. Learn more .
<div><div><div></div></div><div>Form elements have associated labels</div><div></div></div>	Labels ensure that form controls are announced properly by assistive technologies, like screen readers. Learn more .

Lists contain only `` elements and script supporting elements (`<script>` and `<template>`).

Screen readers have a specific way of announcing lists. Ensuring proper list structure aids screen reader output. [Learn more](#).

List items (``) are contained within `` or `` parent elements

Screen readers require list items (````) to be contained within a parent ``` or ``` to be announced properly. [Learn more](#).

The document does not use `<meta http-equiv="refresh">`

Users do not expect a page to refresh automatically, and doing so will move focus back to the top of the page. This may create a frustrating or confusing experience. [Learn more](#).

`<object>` elements have `[alt]` text

Screen readers cannot translate non-text content. Adding alt text to ``<object>` elements helps screen readers convey meaning to users. [Learn more](#).

No element has a `[tabindex]` value greater than 0

A value greater than 0 implies an explicit navigation ordering. Although technically valid, this often creates frustrating experiences for users who rely on assistive technologies. [Learn more](#).

Cells in a `<table>` element that use the `[headers]` attribute refer to table cells within the same table.

Screen readers have features to make navigating tables easier. Ensuring ``<td>` cells using the ``[headers]`` attribute only refer to other cells in the same table may improve the experience for screen reader users. [Learn more](#).

`<th>` elements and elements with `[role="columnheader"/"rowheader"]` have data cells they describe.

Screen readers have features to make navigating tables easier. Ensuring table headers always refer to some set of cells may improve the experience for screen reader users. [Learn more](#).

`[lang]` attributes have a valid value

Specifying a valid [BCP 47 language](#) on elements helps ensure that text is pronounced correctly by a screen reader. [Learn more](#).

`<video>` elements contain a `<track>` element with `[kind="captions"]`

When a video provides a caption it is easier for deaf and hearing impaired users to access its information. [Learn more](#).

Best Practices

Trust and Safety

Ensure CSP is effective against XSS attacks

A strong Content Security Policy (CSP) significantly reduces the risk of cross-site scripting (XSS) attacks. [Learn more](#)

Description	Directive	Severity
No CSP found in enforcement mode		High

General

Detected JavaScript libraries

All front-end JavaScript libraries detected on the page. [Learn more](#).

Name	Version
jQuery	3.6.0

Passed audits (16)

Uses HTTPS

All sites should be protected with HTTPS, even ones that don't handle sensitive data. This includes avoiding [mixed content](#), where some resources are loaded over HTTP despite the initial request being served over HTTPS. HTTPS prevents intruders from tampering with or passively listening in on the communications between your app and your users, and is a prerequisite for HTTP/2 and many new web platform APIs. [Learn more](#).

Links to cross-origin destinations are safe

Add `rel="noopener"` or `rel="noreferrer"` to any external links to improve performance and prevent security vulnerabilities. Learn more.	
Avoids requesting the geolocation permission on page load	^
Users are mistrustful of or confused by sites that request their location without context. Consider tying the request to a user action instead. Learn more.	
Avoids requesting the notification permission on page load	^
Users are mistrustful of or confused by sites that request to send notifications without context. Consider tying the request to user gestures instead. Learn more.	
Avoids front-end JavaScript libraries with known security vulnerabilities	^
Some third-party scripts may contain known security vulnerabilities that are easily identified and exploited by attackers. Learn more.	
Allows users to paste into password fields	^
Preventing password pasting undermines good security policy. Learn more.	
Displays images with correct aspect ratio	^
Image display dimensions should match natural aspect ratio. Learn more.	
Serves images with appropriate resolution	^
Image natural dimensions should be proportional to the display size and the pixel ratio to maximize image clarity. Learn more.	
Page has the HTML doctype	^
Specifying a doctype prevents the browser from switching to quirks-mode. Learn more.	
Properly defines charset	^
A character encoding declaration is required. It can be done with a ` <meta/> ` tag in the first 1024 bytes of the HTML or in the Content-Type HTTP response header. Learn more.	
Avoids <code>unload</code> event listeners	^
The <code>unload</code> event does not fire reliably and listening for it can prevent browser optimizations like the Back-Forward Cache. Consider using the <code>pagehide</code> or <code>visibilitychange</code> events instead. Learn more	
Avoids Application Cache	^
Application Cache is deprecated. Learn more.	
Avoids deprecated APIs	^
Deprecated APIs will eventually be removed from the browser. Learn more.	
No browser errors logged to the console	^
Errors logged to the console indicate unresolved problems. They can come from network request failures and other browser concerns. Learn more	
Page has valid source maps	^
Source maps translate minified code to the original source code. This helps developers debug in production. In addition, Lighthouse is able to provide further insights. Consider deploying source maps to take advantage of these benefits. Learn more.	
No issues in the <code>Issues</code> panel in Chrome Devtools	^
Issues logged to the <code>Issues</code> panel in Chrome Devtools indicate unresolved problems. They can come from network request failures, insufficient security controls, and other browser concerns. Open up the Issues panel in Chrome DevTools for more details on each issue.	
Not applicable (1)	^
<input type="radio"/> Fonts with <code>font-display: optional</code> are preloaded	^
Preload <code>optional</code> fonts so first-time visitors may use them. Learn more	

SEO

These checks ensure that your page is following basic search engine optimization advice. There are many additional factors Lighthouse does not score here that may affect your search ranking, including performance on [Core Web Vitals](#). [Learn more.](#)

Additional items to manually check (1) — Run these additional validators on your site to check additional SEO best practices.

Structured data is valid

Run the [Structured Data Testing Tool](#) and the [Structured Data Linter](#) to validate structured data. [Learn more.](#)

Passed audits (11)

Has a `<meta name="viewport">` tag with `width` or `initial-scale`

A `<meta name="viewport">` not only optimizes your app for mobile screen sizes, but also prevents [a 300 millisecond delay to user input](#). [Learn more.](#) TBT

Document has a `<title>` element

The title gives screen reader users an overview of the page, and search engine users rely on it heavily to determine if a page is relevant to their search. [Learn more.](#)

Document has a meta description

Meta descriptions may be included in search results to concisely summarize page content. [Learn more.](#)

Page has successful HTTP status code

Pages with unsuccessful HTTP status codes may not be indexed properly. [Learn more.](#)

Links have descriptive text

Descriptive link text helps search engines understand your content. [Learn more.](#)

Links are crawlable

Search engines may use `href` attributes on links to crawl websites. Ensure that the `href` attribute of anchor elements links to an appropriate destination, so more pages of the site can be discovered. [Learn More](#)

Page isn't blocked from indexing

Search engines are unable to include your pages in search results if they don't have permission to crawl them. [Learn more.](#)

Document has a valid `hreflang`

hreflang links tell search engines what version of a page they should list in search results for a given language or region. [Learn more.](#)

Document uses legible font sizes — 100% legible text

Font sizes less than 12px are too small to be legible and require mobile visitors to “pinch to zoom” in order to read. Strive to have >60% of page text ≥12px. [Learn more.](#)

Show 3rd-party resources (0)

Source	Selector	% of Page Text	Font Size
Legible text		100.00%	≥ 12px

Document avoids plugins

Search engines can't index plugin content, and many devices restrict plugins or don't support them. [Learn more.](#)

Tap targets are sized appropriately — 100% appropriately sized tap targets

Interactive elements like buttons and links should be large enough (48x48px), and have enough space around them, to be easy enough to tap without overlapping onto other elements. [Learn more.](#)

Not applicable (3)

robots.txt is valid

If your robots.txt file is malformed, crawlers may not be able to understand how you want your website to be crawled or indexed. [Learn more.](#)

Image elements have `[alt]` attributes

Informative elements should aim for short, descriptive alternate text. Decorative elements can be ignored with an empty alt attribute. [Learn more.](#)

Document has a valid `rel=canonical`

Canonical links suggest which URL to show in search results. [Learn more.](#)

Progressive Web App

These checks validate the aspects of a Progressive Web App. [Learn more.](#)

Installable	
<div><div>▲</div><div>Web app manifest or service worker do not meet the installability requirements — 1 reason</div><div>^</div></div>	
<div>Service worker is the technology that enables your app to use many Progressive Web App features, such as offline, add to homescreen, and push notifications. With proper service worker and manifest implementations, browsers can proactively prompt users to add your app to their homescreen, which can lead to higher engagement. Learn more.</div>	
<div>Failure reason</div>	
<div>No manifest was fetched</div>	
PWA Optimized	
<div><div>▲</div><div>Does not register a service worker that controls page and <code>start_url</code></div><div>^</div></div>	
<div>The service worker is the technology that enables your app to use many Progressive Web App features, such as offline, add to homescreen, and push notifications. Learn more.</div>	
<div><div></div><div>Redirects HTTP traffic to HTTPS</div><div>^</div></div>	
<div>If you've already set up HTTPS, make sure that you redirect all HTTP traffic to HTTPS in order to enable secure web features for all your users. Learn more.</div>	
<div><div>▲</div><div>Is not configured for a custom splash screen Failures: No manifest was fetched.</div><div>^</div></div>	
<div>A themed splash screen ensures a high-quality experience when users launch your app from their homescreens. Learn more.</div>	
<div><div>▲</div><div>Does not set a theme color for the address bar. Failures: No manifest was fetched, No <code><meta name="theme-color"></code> tag found.</div><div>^</div></div>	
<div>The browser address bar can be themed to match your site. Learn more.</div>	
<div><div></div><div>Content is sized correctly for the viewport</div><div>^</div></div>	
<div>If the width of your app's content doesn't match the width of the viewport, your app might not be optimized for mobile screens. Learn more.</div>	
<div><div></div><div>Has a <code><meta name="viewport"></code> tag with <code>width</code> or <code>initial-scale</code></div><div>^</div></div>	
<div>A <code><meta name="viewport"></code> not only optimizes your app for mobile screen sizes, but also prevents a 300 millisecond delay to user input. Learn more. TBT</div>	
<div><div>▲</div><div>Does not provide a valid <code>apple-touch-icon</code></div><div>^</div></div>	
<div>For ideal appearance on iOS when users add a progressive web app to the home screen, define an <code>apple-touch-icon</code>. It must point to a non-transparent 192px (or 180px) square PNG. Learn More.</div>	
<div><div>▲</div><div>Manifest doesn't have a maskable icon No manifest was fetched</div><div>^</div></div>	
<div>A maskable icon ensures that the image fills the entire shape without being letterboxed when installing the app on a device. Learn more.</div>	
<div>Additional items to manually check (3) — These checks are required by the baseline PWA Checklist but are not automatically checked by Lighthouse. They do not affect your score but it's important that you verify them manually.</div>	
<div><div></div><div>Site works cross-browser</div><div>^</div></div>	
<div>To reach the most number of users, sites should work across every major browser. Learn more.</div>	
<div><div></div><div>Page transitions don't feel like they block on the network</div><div>^</div></div>	
<div>Transitions should feel snappy as you tap around, even on a slow network. This experience is key to a user's perception of performance. Learn more.</div>	
<div><div></div><div>Each page has a URL</div><div>^</div></div>	
<div>Ensure individual pages are deep linkable via URL and that URLs are unique for the purpose of shareability on social media. Learn more.</div>
